Reference #: 2026-14-IP
From: Inpatient and Outpatient Healthcare Quality Systems Development and Program Support
Sent: February 10, 2026
To: EHR Recipient List
Subject: **Quality Data Implementation (QDI) User Group**

The Quality Data Implementation (QDI) user group reviews standards and data models used to express quality measures. As CMS quality measurement transitions to the use of Fast Healthcare Interoperability Resources (FHIR) standards, the group has increased its focus on FHIR-based models, especially Quality Improvement (QI)-Core. To enhance implementer participation in addressing real-world data availability, the QDI user group provides a collaborative forum for implementers, measure developers, standards experts, and other stakeholders to share insights, identify real-world challenges, and work toward alignment across quality data models.

Next Meeting Details:

Date: Wednesday, February 18, 2026 from 3:00-4:30 PM ET
